

AUTOALIGNING COUPLING DEVICE

ABSTRACT

5

Coupling device for joining a first body with a second body according to a joint plane wherein the device comprises a projection (1) integral with the first body and a cavity (7) integral with the second body.
10 The projection (1) has a first alignment surface (3) and the cavity (7) has an alignment member (9) such that the alignment member (9) forces the alignment surface (3) to move towards an alignment point (5) defined in the joint plane.
